**RE: Cobalt and Mica content**

To Whom it May Concern:

Snaptron provides customers with tactile dome switch products manufactured from 300 series stainless steel. The tactile domes may or may not be plated with nickel, gold, silver or tin.

Cobalt is used in the plating process. Snaptron's EMRT template documents the source of cobalt for plated products.

Cobalt may also be found in trace amounts in stainless steel, in quantities insufficient to be considered "intentionally added". As such, a cobalt-negative EMRT may be provided for standard, non-plated products.

None of Snaptron's products contain mica.

In preparing this response, Snaptron has relied on information provided by our suppliers.
