RE: Greenhouse Gas (GHG) emissions and Carbon Border Adjustment Mechanism (CBAM) regulation

Snaptron provides customers tactile dome switch products manufactured from 300 series stainless steel and polyester carrier tapes.

We are in the very early stages of establishing a framework for identifying, documenting and quantifying the Scope 1, 2 and 3 GHG emissions related to our manufacturing process and embedded in purchased materials. Our goal is to provide useful data to customers subject to the CBAM regulation. This effort will take approximately two years to complete.

We are unable to provide quantitative data regarding GHG emissions at this time. However, we will update this statement periodically to reflect the progress of this effort.
